7 Derived Rate Equations

When interpreted as an ordinary differential equation framework, this model implies the following set of equations for the rates of change of each species.

Identifiers for kinetic laws highlighted in gray cannot be verified to evaluate to units of SBML substance per time. As a result, some SBML interpreters may not be able to verify the consistency of the units on quantities in the model. Please check if

- parameters without an unit definition are involved or
- volume correction is necessary because the `hasOnlySubstanceUnits` flag may be set to `false` and `spacialDimensions` > 0 for certain species.

7.1 Species x

Name p53

Initial concentration $0.02 \text{ item} \cdot \text{l}^{-1}$

This species takes part in four reactions (as a reactant in R2, R3 and as a product in R1 and as a modifier in R4).

$$\frac{d}{dt}x = v_1 - v_2 - v_3 \quad (11)$$

7.2 Species y

Name Mdm2

Initial concentration $0.02 \text{ item} \cdot \text{l}^{-1}$

This species takes part in three reactions (as a reactant in R5 and as a product in R4 and as a modifier in R3).

$$\frac{d}{dt}y = v_4 - v_5 \quad (12)$$
